

## ePIPE<sup>®</sup> Restores San Diego Apartment Community with 2 Hour Return to Service

### The **MODERNAIRE** APARTMENTS

#### The Problem:

A 41 unit apartment building in San Diego, CA was experiencing pinhole leaks. Chloramines in the water supply have been eating away at all types of piping systems at an epidemic rate, and Southern California is one of the nation's hot spots for pinhole leaks.

#### The Solution:

ePIPE FRS with a 2 hour return to service.

With less mess, stress and destruction than a traditional repipe, patented ePIPE "in-place" pipe restoration is the proven long-term

solution for failing piping systems. The minimally invasive ePIPE process restores pipes from the inside out, and protects from future leaks and corrosion.

Orange County based Pipe Restoration Inc., the nation's largest ePIPE installer, restored the piping system and completed the project on time in less than 5 weeks. All but a few units had water back on every day by 4:30pm, alleviating the need to displace the residents living in the complex.

#### About Pipe Restoration, Inc.

Pipe Restoration, Inc. (PRI) has been performing the ePIPE process since 2001. Based out of Orange County California, the company has performed the ePIPE process on over 10,000 local residences in Orange, Los Angeles, Ventura, Riverside and San Diego Counties. PRI has also completed projects nationwide for major hotels, commercial buildings, hospitals and various Department of Defense projects. To contact PRI, visit their website at [www.RestoreMyPipes.com](http://www.RestoreMyPipes.com) or call (800) 359-6369.
