

Combat the Lead (Pb) Epidemic and Poison Pipes with LeadSmart® and ePIPE®

With every day that passes, awareness grows and the need for a solution to the lead epidemic becomes increasingly evident. From homes, to schools and commercial buildings, more and more people are affected daily by exposure to lead and poison pipes.

NO AMOUNT of lead exposure is safe.

Lead Exposure can lower IQ, lead to behavioral problems, cause heart disease and even lead to death.

Change is Coming

Many states are beginning to mandate testing at schools and other public facilities where lead exposure from drinking water can occur.

Lead disclosure in pipes and in water in real estate transactions may not be mandatory nationwide (yet), but the number of states requiring disclosure related to the dangers of lead in water is growing.

- Eleven states require mandatory disclosure of pipe material, some of which specifically ask about the presence of lead pipes.
- Twenty states require disclosure of general environmental hazards, including lead and other hazardous conditions

ePIPE is at the forefront of the lead issue, creating awareness, urging disclosure changes in the real estate industry, and offering both its ePIPE and LeadSmart products and services as a viable solution to lead leaching.

Coastal Real Estate Guide, a local Southern California publication, recently featured an article written by ePIPE CEO and Founder, Larry Gillanders, to bring about lead awareness in an area that does not have lead pipes or lead service lines (LSLs) contributing to elevated lead levels, yet still faces the same risks due to lead contributors such as lead solder and brass fittings in piping systems. **To read the full article, [click here](#).**

What can you do?

Have your water tested by a LeadSmart Certified Technician.

LeadSmart is America's Fastest Growing Lead (Pb) Detection and Remediation Service. Certified LeadSmart providers provide on-site water testing for lead in drinking water by using EPA-approved equipment, education on how to identify sources of lead in piping systems, professional remediation recommendations and a certificate of compliance. These services are also backed by an industry-first, \$1 million Professional Errors and Omissions Insurance program.

Got Lead? Get ePIPE Lead-Free, Leak-Free™ Pipe Protection.

ePIPE is MORE than just Leak Protection. The patented ePIPE process is a proven solution for reduction of lead in drinking water due to lead pipes and/or lead contributors. **ePIPE effectively reduces lead levels to well below the EPA guidelines and also protects against leaks and other forms of corrosion in piping systems.** ePIPE has been chosen in schools, HOA's, single family homes and multiple other types of properties as a solution for lead and leaks.

ePIPE and LeadSmart – Committed to Leading the way to Lead-Free, Leak-Free Pipes.
