## MIRAMAR HOTEL EXPERIENCING MULTIPLE LEAKS

### WATER PIPES IN NEED OF ATTENTION

Marriott hotels are known for their fine appointments and excellent service. However, this Courtyard hotel that serves the Miramar & SW Ft. Lauderdale area was suffering from continual leaks in the copper water piping. Replacing all the water piping would mean much destruction to the facilities and disruption to their guests. After looking into their options, the hotel owners found the neater, cleaner, and non destructive ePIPE System from Florida Pipe-Lining Solutions. This unique and Patented epoxy barrier coating system restores copper pipes to a like-new condition without the destruction, mess, and remodeling associated with re-piping.

### THE FIX FROM Florida Pipe-Lining Solutions AND ePIPE

Project Manager, Mike Larson and his crew commenced the project by draining the water system and using compressed air to dry out the piping. After the water piping was dry and clean, the ePIPE Technicians installed the ePIPE epoxy barrier coating to the inside of the piping that provides water to all 128 guest rooms, 32 riser groups, kitchen, laundry, and the pool house. Holder of 8 Patents, the ePIPE barrier coating provides a durable porcelain like finish that prevents leaks from returning. After the piping was cured, the entire system tested and put back into service.

### SATISFACTION AT COURTYARD BY MARRIOTT

Even with the leak prone Miramar area, this hotel's piping is now restored and warranted not to leak. The entire restoration project took approximately 90 days without the destruction to the hotel or disruption to the guests that pipe replacement would have caused. This Miramar hotel is satisfied and leak free.
