

ePIPE® Restores Beautiful Beach Home with 2 Hour Return to Service Product

The Problem

This custom 6,500 square foot home on the prestigious Lido Island in Newport Beach was experiencing pinhole leaks. The piping system had 5 leaks that had all been repaired using traditional repipe methods. The homeowners were concerned that they were going to have to keep cutting holes and causing more damage to the exquisite interior of their home. Their plumber told them about the ePIPE epoxy lining system as a viable solution to the corrosion in their pipes that was causing the leaks.

The Solution

ePIPE® patented in-place pipe restoration with a 2 hour return to service.

ePIPE is the preferred alternative to a repipe because it causes less mess and destruction, and provides a solution for pinhole leaks and corrosion within the pipes. The ePIPE team was able to restore the piping system without making any holes in the walls, ceilings or floors. The interior of the house was left exactly the way it was upon their arrival, in "excellent" condition according to the homeowner.

About ePIPE®

The patented ePIPE process involves restoring pipes in-place, with an application of an epoxy barrier coating resulting in a restored epoxy lined piping system. The process provides for a solution for pinhole leaks, corrosion control and prevention of lead leaching from pipes for both commercial and residential piping systems. ePIPE service providers are located in the US, Canada, Mexico and Europe. ePIPE products are sold under the brand names PurPipe®, Nu Pipe® and ePIPE®.
