

ePIPE® Restores Fire Sprinkler System with Minimal Disruption to Homeowner

A 15 year old home in Southern California had already experienced four leaks in their copper drinking water pipes. Like the potable water system the fire sprinkler system was also piped in copper and the homeowner knew it was a matter of time until the fire sprinkler system would start to leak.

The homeowners wanted a solution that would leave them peace of mind that they wouldn't have to deal with the mess and stress of another leak in either of the piping systems and contacted local ePIPE installer, Pipe Restoration, Inc. (PRI).

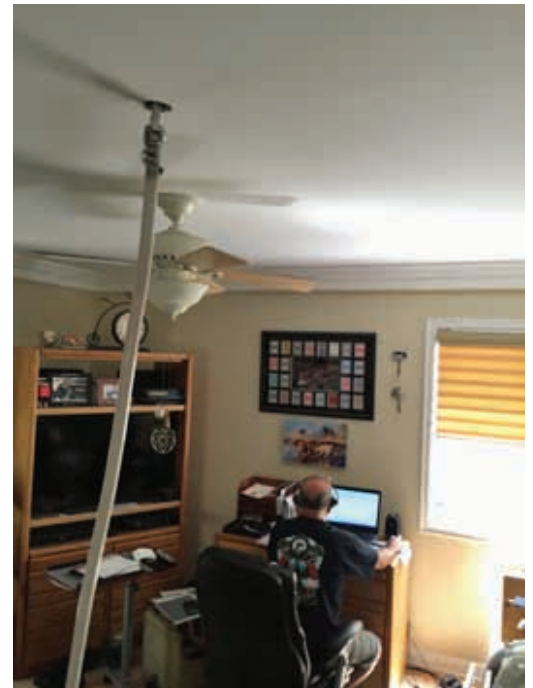

ePIPE has been independently tested and approved by the City of Los Angeles Mechanical Labs for application to fire sprinkler systems.

PRI technicians restored both the potable water and the fire sprinkler systems with minimal disruption to the homeowners. **As you can see, the customer was able to keep his regular work schedule during the restoration.**

Why repipe?® The patented ePIPE process restores pipes "in-place", **with the fastest return to service in the industry.** **Piping systems can be restored in-place in a matter of hours not days!**

About Pipe Restoration, Inc and ePIPE®

Pipe Restoration, Inc. (PRI) has been performing the ePIPE process since 2001. Based out of Orange County California, the company has performed the ePIPE process on thousands of local residences in Orange, Los Angeles, Ventura, Riverside and San Diego Counties. PRI has also completed projects nationwide for major hotels, commercial buildings, hospitals and various Department of Defense projects. Contact PRI, visit their website at www.RestoreMyPipes.com or call (800) 359-6369.
